

SYLLABUS

COURSE # AND TITLE CAPP 150 Chrysler Engines & Related Systems
OF CREDITS 4

CATALOG DESCRIPTION

This course covers the principles and operation of the DaimlerChrysler internal combustion engine. Internal combustion engines will be properly disassembled with nomenclature identification. All parts will be inspected, measured, and reassembled. The operation and repair of the oiling and cooling system will also be covered. Troubleshooting and diagnostic procedures will be emphasized on all systems. Co-requisite CAPP 160.

Semester Offered: Summer

Prerequisites:

Common Student Learning Outcomes

Upon successful completion of San Juan College programs and degrees, the student will demonstrate competency in...

BROAD AND SPECIALIZED LEARNING

Students will actively and independently acquire, apply, and adapt skills and knowledge with an awareness of global contexts.

CRITICAL THINKING

Students will think analytically and creatively to explore ideas, make connections, draw conclusions and solve problems.

CULTURAL AND CIVIC ENGAGEMENT

Students will act purposefully, reflectively, and ethically in diverse and complex environments.

EFFECTIVE COMMUNICATION

Students will exchange ideas and information with clarity in multiple contexts.

INFORMATION LITERACY

Students will be able to recognize when information is needed and have the ability to locate, evaluate, and use it effectively.

INTEGRATING TECHNOLOGIES

Students will demonstrate fluency in the application and use of technologies in multiple contexts.

Student work from this class may be randomly selected and used anonymously for assessment of course, program, and/or institutional learning outcomes. For more information, please refer to the Dean of the appropriate School.

GENERAL LEARNING OBJECTIVES

1. To prepare the student for competence in repairing or rebuilding modern engines.
2. Completion of 100% of NATEF priority 1 tasks.
3. Completion of 85% of NATEF priority 2 tasks.
4. Completion of 75% of NATEF priority 1 tasks.

SPECIFIC LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to...

1. Demonstrate safe procedures for engine service.
2. Demonstrate knowledge of gasoline engine operating principles.
3. Identify various under-hood lubricants and their usage.
4. Perform an engine oil pressure test.
5. Locate and repair engine oil leaks.
6. Disassemble and assemble V type and in-line engine designs.
7. Identify various engine sealants and their applications.
8. Measure crankshaft rod and main journals for taper and out-of-round.

9. Measure crankshaft end play with a dial indicator.
10. Plasti-gage main and rod bearings.
11. Measure cylinder walls for taper and out-of round and fit pistons.
12. Deglaze cylinder walls.
13. Install piston rings and check ring gap clearances.
14. Remove cylinder ridge.
15. Time camshaft(s) to crankshaft.
16. Inspect timing chains, gears, and belts for wear and stretch.
17. Inspect oil pump & lubrication system.
18. Perform a complete valve job.
19. Inspect valve train and guides per manufacturer procedure.
20. Remove and replace core plugs.
21. Diagnose engine noises such as piston slap, rod knock, carbon build-up and valve noise.
22. Adjust hydraulic and solid lifters.
23. Demonstrate competency in using engine overhaul tools.
24. Remove and install front wheel and rear wheel drive engines.
25. Remove and install valve covers in the vehicle.
26. Remove and install intake manifold in the vehicle.
27. Pressure test the cooling system & diagnose coolant loss.
28. Remove and replace hoses, radiators, and cooling fan.
29. Remove and replace a water pump.
30. Remove, inspect, and replace a thermostat.
